## Laser cutting

The laser cutting system is a universal 'tool' for our acrylic processing. Frequently changing geometries and material thicknesses require considerably less effort with laser processing. The advantages of laser cutting are clearly recognisable in plastics and advertising technology. A flame-polished cut edge is produced without additional material post-processing. The flexible, fast production process saves time by eliminating the need for clamping devices and reworking. Non-contact material processing enables the creation of complicated 2-D shapes around the circumference. Finely executed geometries in the tenth of a millimetre range are thus possible.

## Laser engravings

Our laser system can be used to engrave acrylic glass as well as a wide range of other materials. The areas of application for you as a customer of BSA Kunststofftechnik are as varied as your ideas.

- Lettering, also self-adhesive
- Advertising technology
- Shop and trade fair construction
- Architectural modelling
- Displays
- POS materials
- Exterior and interior signage, also illuminated
- Acrylic trophies for your event
